evident

Insurance Verifications

Evident is revolutionizing the way personal data is shared. With connections to thousands of authoritative sources through a single API, Evident is the only platform that enables comprehensive and up-to-date identity and credential verifications without the risk and liability of holding personal information.

Evident's insurance verification platform can validate both personal and commercial policy coverage, including, but not limited to: general liability, professional liability, vehicle insurance (e.g. automobile, watercraft, aircraft, etc.), and more.

Simple. Accurate. Secure. Compliant.

Design
Choose your verification type from a set of insurance policy components, and determine whether you'd like to see specific policy values or simply know if a policy is valid.

Request
With a simple scan of the insurance policy and minimal data entry, our verification process is initiated with minimal friction.

Verify
Trained to identify insurance documents across 120 countries and in over 40 languages, our verification specialists communicate with a wide range of global insurance providers to ensure that an individual's policy is active, valid, and meets company requirements.

Review or Subscribe
Choose how frequently you'd like for the individual or business' insurance policy to be evaluated and reviewed by selecting a one-time verification, or an ongoing re-verification subscription to confirm that your platform user is always insured.

Technology & Scale

Technology

Evident's unique distributed data model and cryptographically-enforced access controls make it possible to share granular data with only the specific entities that request it, giving companies access to a summarized or reduced version of the verified data they need while virtually eliminating their risk of exposure sensitive personal data.

Each company, individual, and data source has a separate public/private key pair, which is used for encryption and signing operations. These keys are used to establish private communication channels, encrypt data at rest, and guarantee data integrity and non-repudiation.

While our solution is built for automating identity and other types of credential verifications, our team of experts manually verifies each individual insurance policy directly with the provider, guaranteeing a greater level of assurance and accuracy while minimizing attrition.

Scale

A simple and comprehensive solution for every type of onboarding and approval process, Evident is easy to integrate, even easier to use, and offers the diligence and confidence necessary to comply with regulatory requirements and achieve business goals.

From identity verification and selfie, to drivers license status, MVR checks, criminal history, and more, Evident's holistic verification solution adapts to businesses' new needs as they grow. With four primary implementation methods, our technology is both flexible and scalable, helping companies obtain a higher level of assurance without added development time and resources.

Enabling companies of all industries, sizes, and geographies to verify insurance coverage without risking exposure to sensitive data...**that's the power of Evident.**
